# China Macroeconomic Analytical and Forecasting System

powered by **PROGNOZ**

Catch one of the finest tools available to analyze and model today's economy – the PROGNOZ China Macroeconomic Analytical and Forecasting System, an all-in-one user-friendly platform replete with powerful visualization tools and automated reporting functionality, is the solution you need to build short and medium-term forecast models.

The application is based on data from famous Chinese data providers and allows you to monitor and analyze key macroeconomic indicators from centralized data warehouse including the following groups of indicators: general survey, national accounts, employment and wages, people's livelihood, industry, price index, government revenue and expenditures, investment in fixed assets and real estate development, domestic and foreign trade, foreign capital utilization, and other factors.

The system facilitates strategic, analytically-based decision-making process that can enhance the competitive advantages of the Chinese economy. The model comes with demand-side approach and is capable of forecasting key macroeconomic indicators. Moreover, the system allows you to:

- determine dependencies between sectors of economy
- reveal factors influencing and limiting the development of enterprises, industries and the country on the whole
- estimate policy impact
- predict economic tendencies, booms and declines, thus detecting their key reasons and consequences

Various estimation methods ensure that your equation is always the best fit, and you are free to generate multiple scenarios to see the impact of changes on specific factors.

Contact PROGNOZ today and discover first-hand how the PROGNOZ China Macroeconomic Analytical and Forecasting System can help your organization keep up with the pace of innovation.
